

## Using the KLN 89B for SAR

### Find Nearest Airport

Press NRST then ENTER. That's it.

### Create a Waypoint at a known Lat-Long

Select USR, press CRSR, and name the waypoint (up to 5 letters / Numbers). Select USR L/L and hit ENTER. Enter the Latitude and Longitude, beginning with N for North Latitude. The format is XX XX.XX'. Hit ENTER when completed with the first line, then complete the second beginning with W for West Longitude.

### Display Present Lat-Long Position.

Select the NAV page. Use the small knob to get to the 2<sup>nd</sup> subpage (it should say NAV 2 in the lower left of the display). If it is not already displayed, press CRSR (cursor), CLR (clear), and CRSR again.

### Store a Waypoint at Present Position

Go to the NAV 2 page as above. Hit ENTER. Select a name using the knobs or simply press ENTER again to accept the supplied name. If you do that, you will want to make a log of the name and the significance of that point.
